Appn. Filed:
Applicant: Neil Alex Korneff
Appn. Title: On-Demand Ejection for Injection Molds
Examiner/GAU:

Information Disclosure Statement

Commissioner for Patents
Alexandria, VA 22313-1450

Sir,

Attached is a completed Form PTO/SB/08 (A&B) and copies of the pertinent parts of the references cited thereon. Following are comments on any non-English-language references pursuant to Rule 98:

Fisher shows a laser detection system for determining if a parison remains on a core pin after the ejection cycle has occurred, and prevents the machine from recycling and damaging the injection mold if a parison or portion of a parison remains. Lausenhammer shows a detection system and method to determine if an article, or a portion thereof, remains on a machine core pin after the article ejection cycle has occurred, and, if so, prevents the machine from starting a new cycle and damaging the injection mold. Kamiguchi shows a mold protection device capable of automatically setting a reference value for detecting a load exerted on a mold closing process.

All the references do not active ejection sequences on demand if an article, or portion of an article, is detected in the mold as recited in independent claim 1.

Very respectfully,

Applicant:

Neil Alex Korneff
